	STOP	8' x 9'	1		AHEAD	10' x 9'	1
	Electric Vehicle Pump W/ Plug	48" x 48"	1		Electric Vehicle Charging Symbol	40" x 40"	1

### Durable horizontal signage for outdoor use

OPTDSIGN™ is a heavy-duty intersection grade preformed thermoplastic pavement marking built on the proven durability of OPTAMARK™ and engineered to maximize skid resistance and color retention.

### Customized designs available

OPTDSIGN is available in a variety of designs to meet the growing needs for horizontal signage in the public and private sector.

### Focused on the environment

OPTDSIGN emits no environmentally harmful substances during application or at the time of removal. The organic pigments do not contain lead or other heavy metals. There is no plastic around the packages and the cardboard can be recycled.

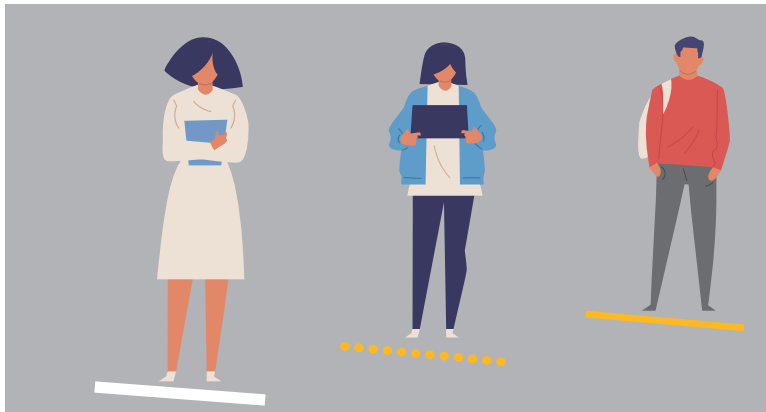

### Innovative cost effective safety solutions

New safety guidelines call for new safety solutions. It is difficult to estimate distance correctly. Social distancing horizontal signs that provide simple visual cues are an ideal safety solution for all ages and nationalities.

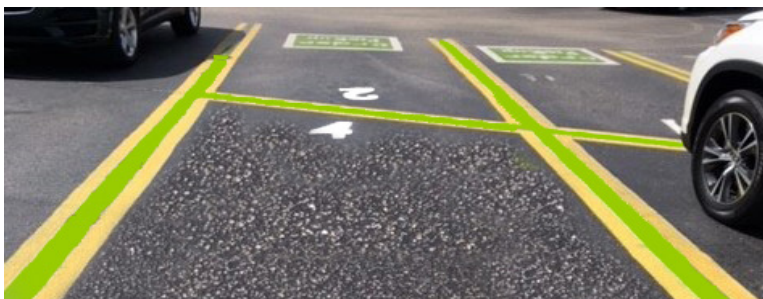

## A nudge in the right direction

The concept of “nudging” is a popular and well-documented way of encouraging people to change their behavior with small graphic cues. It is therefore a perfect means of helping people keep a safe distance.

A symbol combined with lines, shapes or arrows, for example, increases the probability of people sticking to the safety guidelines as they are not forced to assess the safety distance themselves.

## Adjusting to a new way of public life

### Stay safe, mark the spot!

- Public transport: designates where to wait at bus, train, and subway stations
- Outside facilities: encourages people to stand in line at a safe distance
- Order pickups: advises where customers should park to pick up orders
- Schools: specifies where students should walk or stand
- Traffic junctions: indicates where bicyclists should stop
- Sidewalks & pathways: directs pedestrians and bicyclists on how to move safely

## As easy as 1-2-3

OPTDSIGN is fast and easy to apply. Application requires only one person and a propane fueled heat gun. Simple mobilization with no specialized equipment or template.
